

## TOP VIEW: OPEN Position

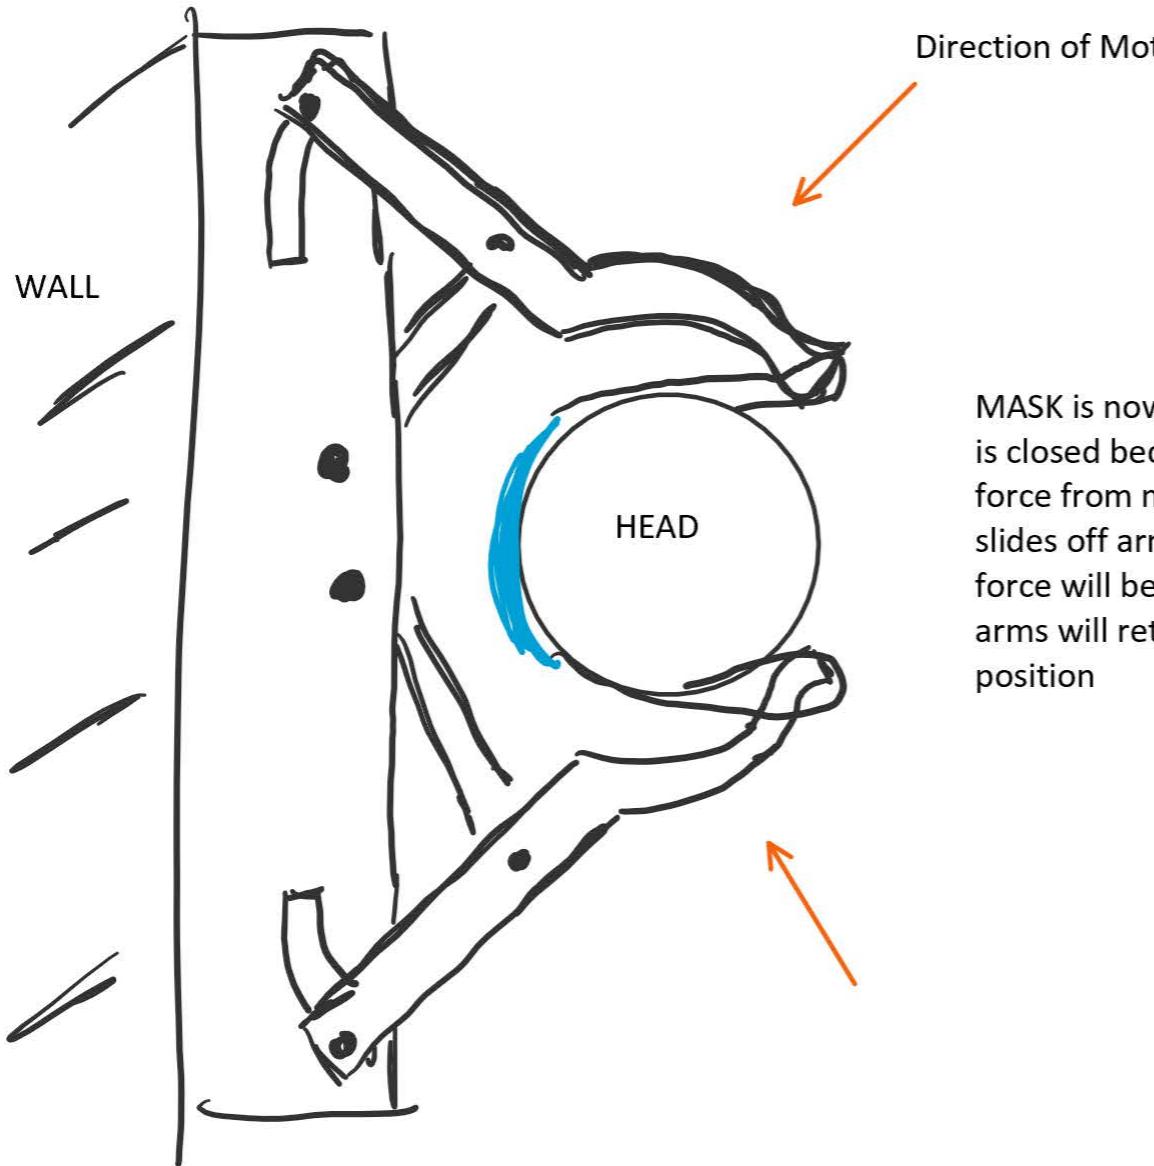

This device is a mask applicator that requires no use of the hands or arms. It is designed to be mounted to a wall. By bringing one's head into the device, using their neck strength, they will draw the two lever arms around their head, thereby placing the mask on their face.

**Pages 1-2:** Rough sketches of the idea

**Pages 3-5:** Prototype made using items around the house

## TOP VIEW: CLOSED Position

MASK is now on HEAD, System is closed because of tension force from mask, when mask slides off arms, the tension force will be released and the arms will return to open position
